## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claim 1 is allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 1, and specifically comprising the limitation of a field emission device including molecular emitters that are bonded to the substrate by means of a conjugate bond. The closest art prior art of reference is Gimzewski et al. (US 6,031,756) which discloses the use of organic molecules attached with a conjugated bond to the substrate of an organic light emitting device. The organic molecules serve to focus electron supply, however the organic light emitting device cannot be considered analogous art to the field emission device of the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Cao et al. (US 6,091,186) discloses the use of monolayers on a field emission device to enhance emission.

Art Unit: 2879

Kayyem et al. (US 6,090,933) discloses the use of molecular elements attached to the substrate by means of a conjugate bond in order to act as biological sensors.
